

The Ultimate RJ CONNECTOR

UltraJax is a State-Of-The-Art New RJ Connector With Double The Wire Contact Assemblies Of Standard RJ Connectors

XMULTIPLE has revolutionized the way RJ Connections are made by developing the UltraJax to connect high- speed networking (such as Gigabit transmission).

This RJ connector, with double the contacts of existing RJ connectors, provides the capability to use existing RJ male plugs or use the new UltraJax male plug.

The UltraJax male plug has contacts on both sides of the plug. If RJ11 or RJ45 connectors are used with the UltraJax female connector, both of these connectors can be utilized with the same single port connector.

Simply plug the RJ11 in to the UltraJax in one direction with the contacts on the top of the internal walls of the UltraJax. Then when you want to use the device in another application, simply insert the RJ45 into the UltraJax in the opposite direction.
