

FocalPoint

FocalPoint USB – USB Cable Specifications

USB Cable With A Rotation And A Twist

FocalPoint-USB is the new way to direct your cables in the positions you desire. Cables can be turned in any direction rotation of 360%. This means cables go where you want them to go, without taking up valuable space on your desktop. Cables can be tailored together from your desktop computers so now you have a neat grouping of cables behind your desktop which may be sitting on your office floor. FocalPoint-USB rotates in the direction you want and the cable snaps into the position you want it to go. Rotate and Snap --- it is that easy.
