Press Release

LOS ANGELES, CA, October 20, 2010 – Xmultiple, a global manufacturer of connectivity products has released their iXP1-500 iPad adapter which solves the problems iPad users have charging from their USB port on their desktop and laptop computers.

iPad Charging with a USB port is in most cases not a feasible solution – The iXP1-500 solves this problem.

The iPad has some cable charging issues which have not been fully resolved. There is a problem related the way the iPad charges with a computers USB port. Users of non-Apple computer and some Apple computers cannot charge the iPad unless they use an electrical wallplate. The 10W Power Adapter which is packaged with the iPad is required if a user wants to charge the iPad. Therefore, to charge the iPad you have to be a slave to a wall outlet.

Unless you have a 2.0 USB connector on your laptop or desktop which will operate with the iPad for charging, Apple states on their website that some USB 2.0 ports and accessories do not provide enough power to charge iPad. When this occurs the message "Not Charging" appears in the status bar next to the battery icon. This appears to happen in most cases. As it turns out the iPad will not charge through USB ports on non-Apple computers. iPad charges just fine through the wall charging brick and accompanying USB data cable. The iPad charges just fine when connected to USB ports on iMac, MacBook Pro. However the non-Apple as a whole have a problem.

- The iPad does not charge correctly when connected to a PC.
- The iPad does not charge correctly when connected to an older MacBook Pro (pre-Unibody).
- The iPad does not charge through USB hubs, regardless of what the hub is connected to (PC or Mac)

The iXP1-500 adapter has been designed to solve the USB power with an inexpensive solution. Simply attach the iXP1-500 adapter to your existing Apple USB cable and your iPad will charge from your computer's USB port – Guaranteed. The iXP1-500 charges the iPad using the USB port on the users computer. No need for a wall outlet. No more frustration.

iXP1-500 Adapter features and Advantage

- Female USB Type A connector to attach to your existing Apple USB cable's male USB Type A connector
- Male USB Type A connector to attach to your computer
- Integrated logic to Solve the iPads power requirement
