iXP1-500 iPad adapter solves charging problems with the Apple iPad

Webinar: Thinking of Master Data Management? Don't Do It! Find Out Why. Learn about the Three Huge Problems with Master Data Management that Result in Project Failure and Wasted Money. Learn How to Solve These Problems Now. [See the Solution!](#) A picture is worth a thousand words.

The iPad charging with a USB port is mostly not a solution. Plugging an iPad into a computer's USB port, instead of an AC jack, often results in syncing only. The iPad requires 10W of energy to charge which is much more than a typical USB port provides. However, even a USB port will work extremely slowly compared to an AC outlet.

That means most desktops and laptop USB ports won't charge the iPad. Therefore, to charge the iPad you have to be a slave to a wall outlet.

Now there is a solution with the iXP1-500 USB adapter. Simply attach the iXP1-500 adapter to your existing Apple charge/sync cable and your iPad will charge from your computer's USB port - Guaranteed.

If a user wants ever a better solution the XP1Power XP-2500 rechargeable battery built into the USB charge/sync cable solves this problem as well and provides a rechargeable battery integrated into the cable to provide power and charging when you are away from home or office.

The iXP1-500 Adapter and the XP1Power XP-2500 are inexpensive solutions and they make charging convenient. Pick the solution, which is best for you. The XP1Power XP-2500 will charge the iPad while you are on the go. Anywhere. No need for an USB port or a wall outlet.
