iXP1-500 Adapter to Avoid not Charging Issue

iPads not getting charged was an Issues of sometimes till now because of low power of USB ports on [windows](#) PC. Some updated [solution](#) came with Asus and MSI Windows PC instead of a common solution. But here the solution comes with iXP1-500 iPad Adapter to avoid the ridiculous not charging problem. The iXP1-500 iPad Adapter is useful for every Mac

operating system, or Windows PC without having any sort of issues.

The use of this adapter is very simple by connecting the adapter between the PC USB ports to Apple charge or, sync cable. And surprisingly, the “Not Charging” issue that regularly comes in the status bar will not be visible anymore. There is no such details of how the design is able to solve the issue, the maker revealed that there is an internal integrated logic which will match its output to the needed iPad power. But, still it is doubtful that the tiny form factor adapter will be able to provide the requisite current for speedy charging or simply vanish the irritating not charging issue.
